GROUPING with HAVING and ORDER BY Clause (extra questions)

Schema:

```
CREATE TABLE Project_Assignments (
    Assignment_ID INT PRIMARY KEY,
    Employee_Name VARCHAR (50),
    Department VARCHAR (30),
    Hours_Worked INT
);

INSERT INTO Project_Assignments VALUES
(101,'Ayaan','AI',38),
(102,'Kiara','Cloud',45),
(103,'Neel','AI',42),
(104,'Meera','Security',31),
(105,'Rohan','Cloud',50),
(106,'Ishita','AI',29),
(107,'Dev','Security',47),
(108,'Sana','Cloud',36),
(109,'Arjun','Security',41),
(110,'Tara','AI',42)
```

Questions:

1) Display each department and the total hours worked.
2) Show departments where the total hours worked are greater than 120.
3) Find the average hours worked in each department and display them from highest to lowest average.
4) Display departments having more than 3 employees.
5) Show departments whose maximum hours worked exceed 45.
6) Find departments where the minimum hours worked is less than 30 and sort by minimum hours.
7) Display each department with employee count and total hours. Show only departments having an average greater than 40.
8) Find departments where total hours are between 100 and 170. Display them in descending order of total hours.
9) Display departments having at least 3 employees. Sort first by employee count (descending), then by department name (ascending).

10) Display each department with:

    - Number of employees
    - Total hours worked
    - Average hours worked

    Show only departments where:

    - Total hours are greater than 110
    - Average hours are greater than 38

    Sort by average hours (descending) and then department name.
