

'LIKE' OPERATOR PRACTICE QUESTIONS

SCHEMA:

```
CREATE TABLE PatientRecords (  
    RecordID INT PRIMARY KEY,  
    PatientName VARCHAR(100),  
    DiagnosisCode VARCHAR(50),  
    TreatmentPlan VARCHAR(250)  
);
```

```
INSERT INTO PatientRecords (RecordID, PatientName, DiagnosisCode,  
TreatmentPlan) VALUES  
  
(201, 'Amy Smith', 'ABC-123', 'Take vitamin pills daily.'),  
(202, 'Bob Jones', 'abc-999', 'Rest and drink water.'),  
(203, 'Cody Miller', 'XYZ-450', 'Take antibiotics daily.'),  
(204, 'Dan_Webb', 'E11', 'Check blood sugar.'),  
(205, '1st_Test', 'XYZ-%', 'Emergency care.');
```

1. Find all records where the PatientName starts with 'A' and ends with 'h'.
2. Find all records where the DiagnosisCode starts with 'abc' and ends with '9'.
3. Find all records where the PatientName starts with 'C' and is exactly 11 characters long.
4. Find all records where the DiagnosisCode ends with a literal percent sign %.
5. Find all records where the TreatmentPlan ends with a period '.
6. Find all records where the PatientName begins with any letter from **A through C**.
7. Find all records where the DiagnosisCode starts with a letter between **X and Z**.
8. Find all records where the DiagnosisCode contains a 3-digit number starting with 4 (i.e., **400 to 499**).
9. Find all records where the PatientName does **NOT** start with any letter between **A and C**.
10. Find all records where the PatientName starts with a number.
11. Find all records where the second letter of the PatientName is a lowercase vowel (**a, e, i, o, u**).
12. Find all records where the DiagnosisCode starts with a letter, followed immediately by two digits.
13. Find all records where the last character of the DiagnosisCode is **not** a letter or a number.
14. Find all records where the PatientName contains a literal underscore '_' anywhere inside it.
